Visible judgment: the OpusClip homepage.

High-fidelity desktop frames at 1440 x 900, captured from a working build. The page is organised as a vertical feed of full-screen sections, modelled on YouTube Shorts and Instagram Reels. Two interactive moments are specified for production: the hero clip selection (Rive) and the product trio (Webflow Interactions).

1. Concept: a homepage that scrolls like Shorts
2. Hero and reel wall
3. Product trio
4. Creators
5. Customer stories
6. Frequently asked questions
7. Closing call to action
8. Footer
9. Spec: hero clip selection
10. Spec: product trio

Footage is Pexels stock used for illustration and is to be replaced with licensed creator clips. Creator images, testimonials, analytics screenshots and badges are sourced from opus.pro. Social icons from Font Awesome Free (CC BY 4.0).

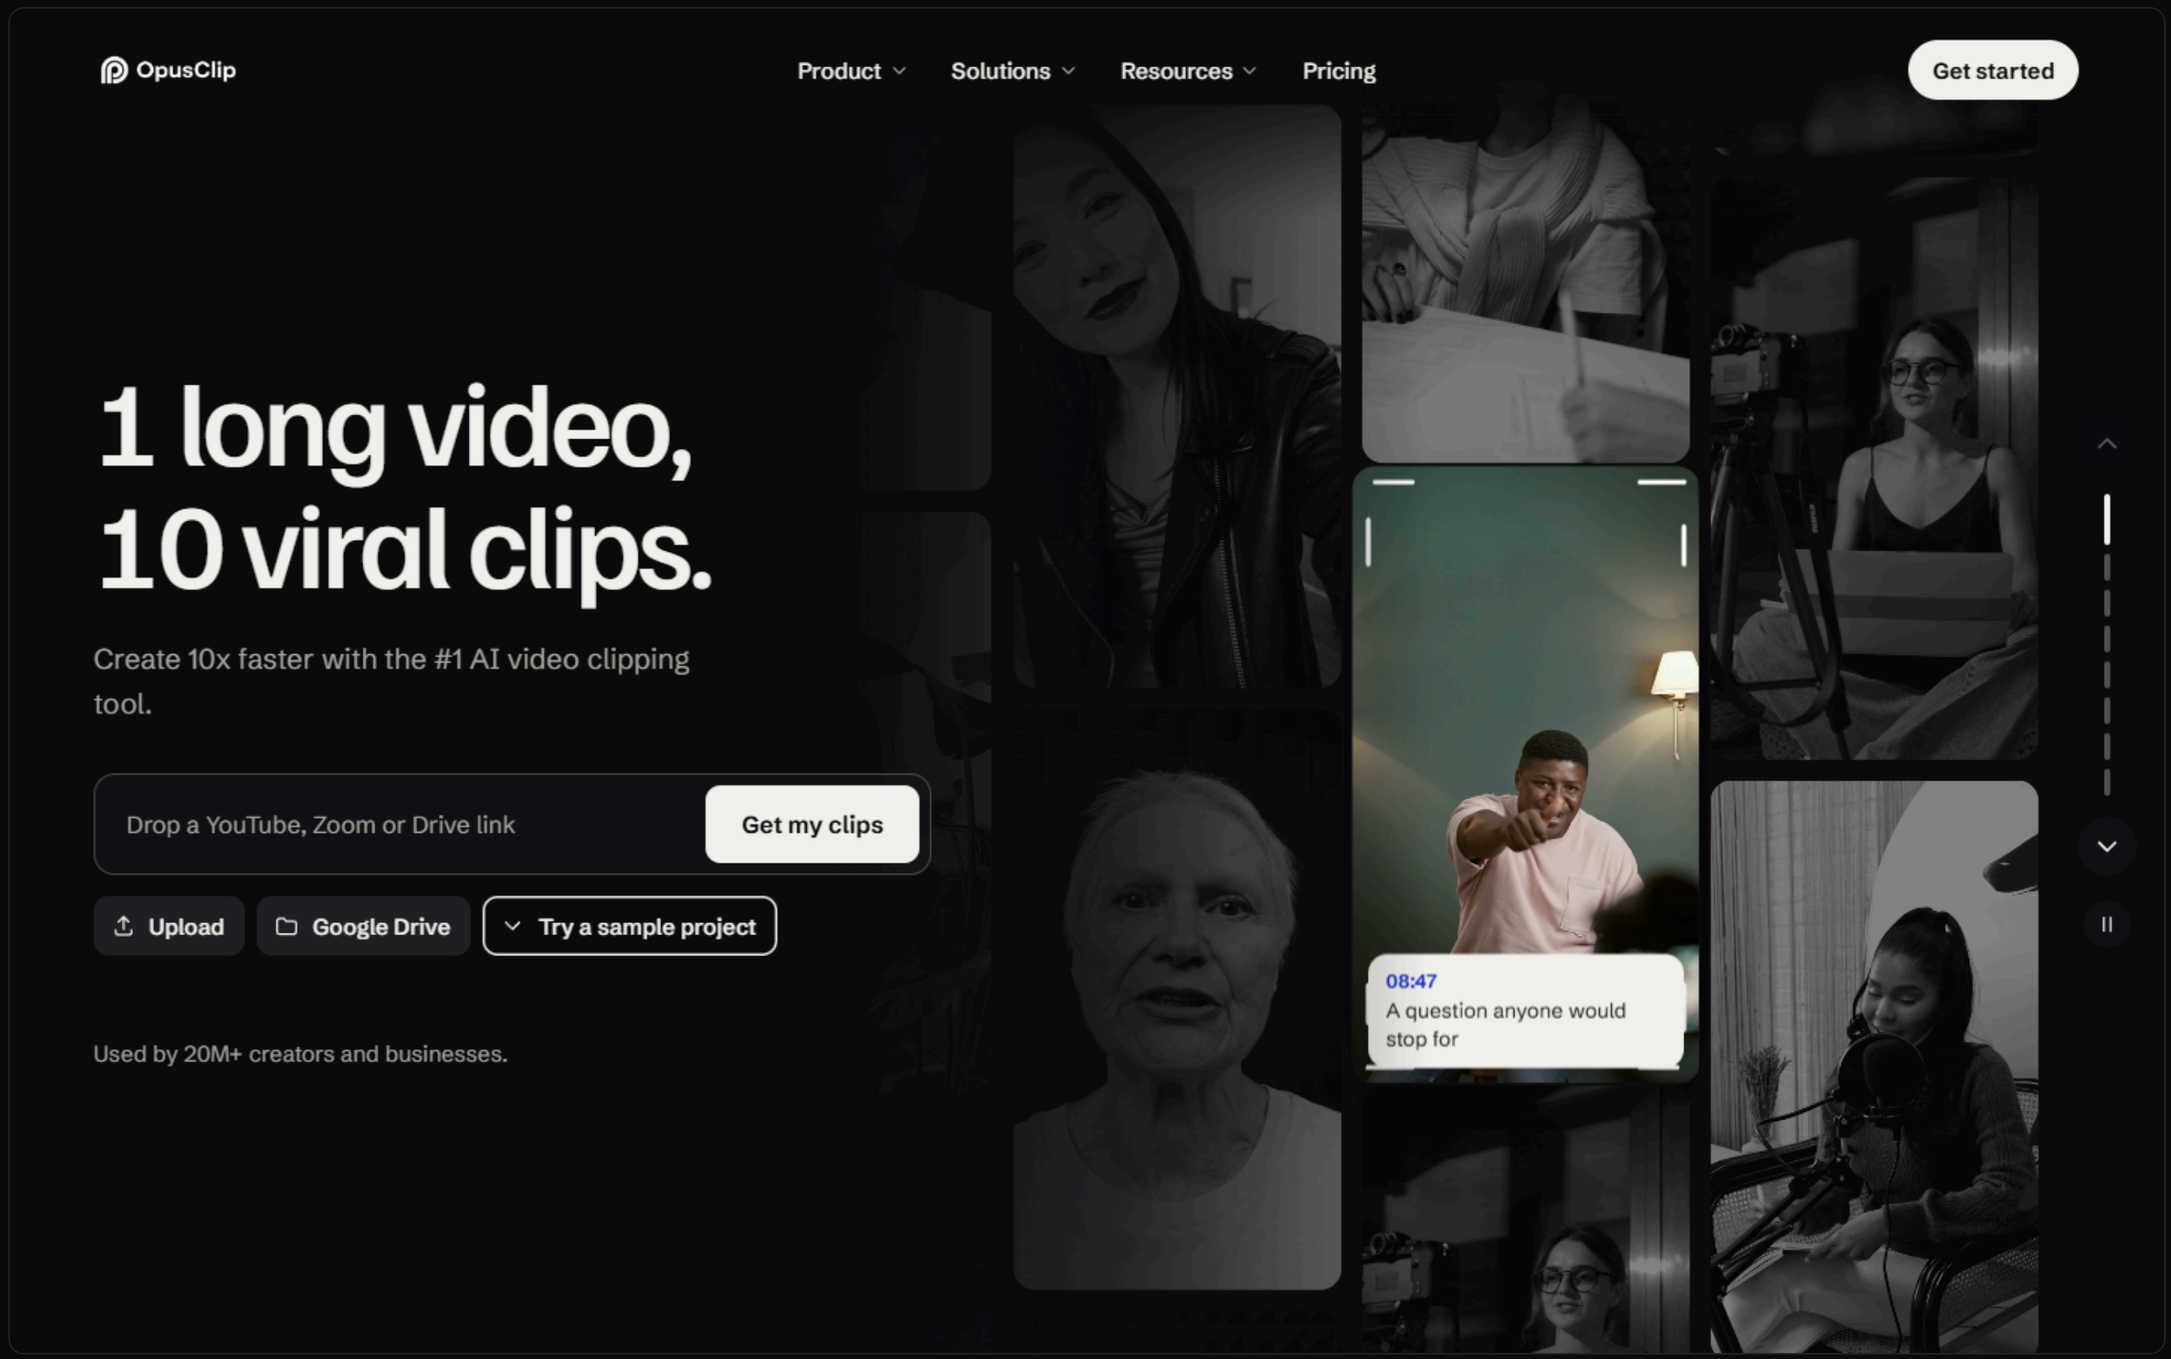

The page behaves like the feed it publishes to

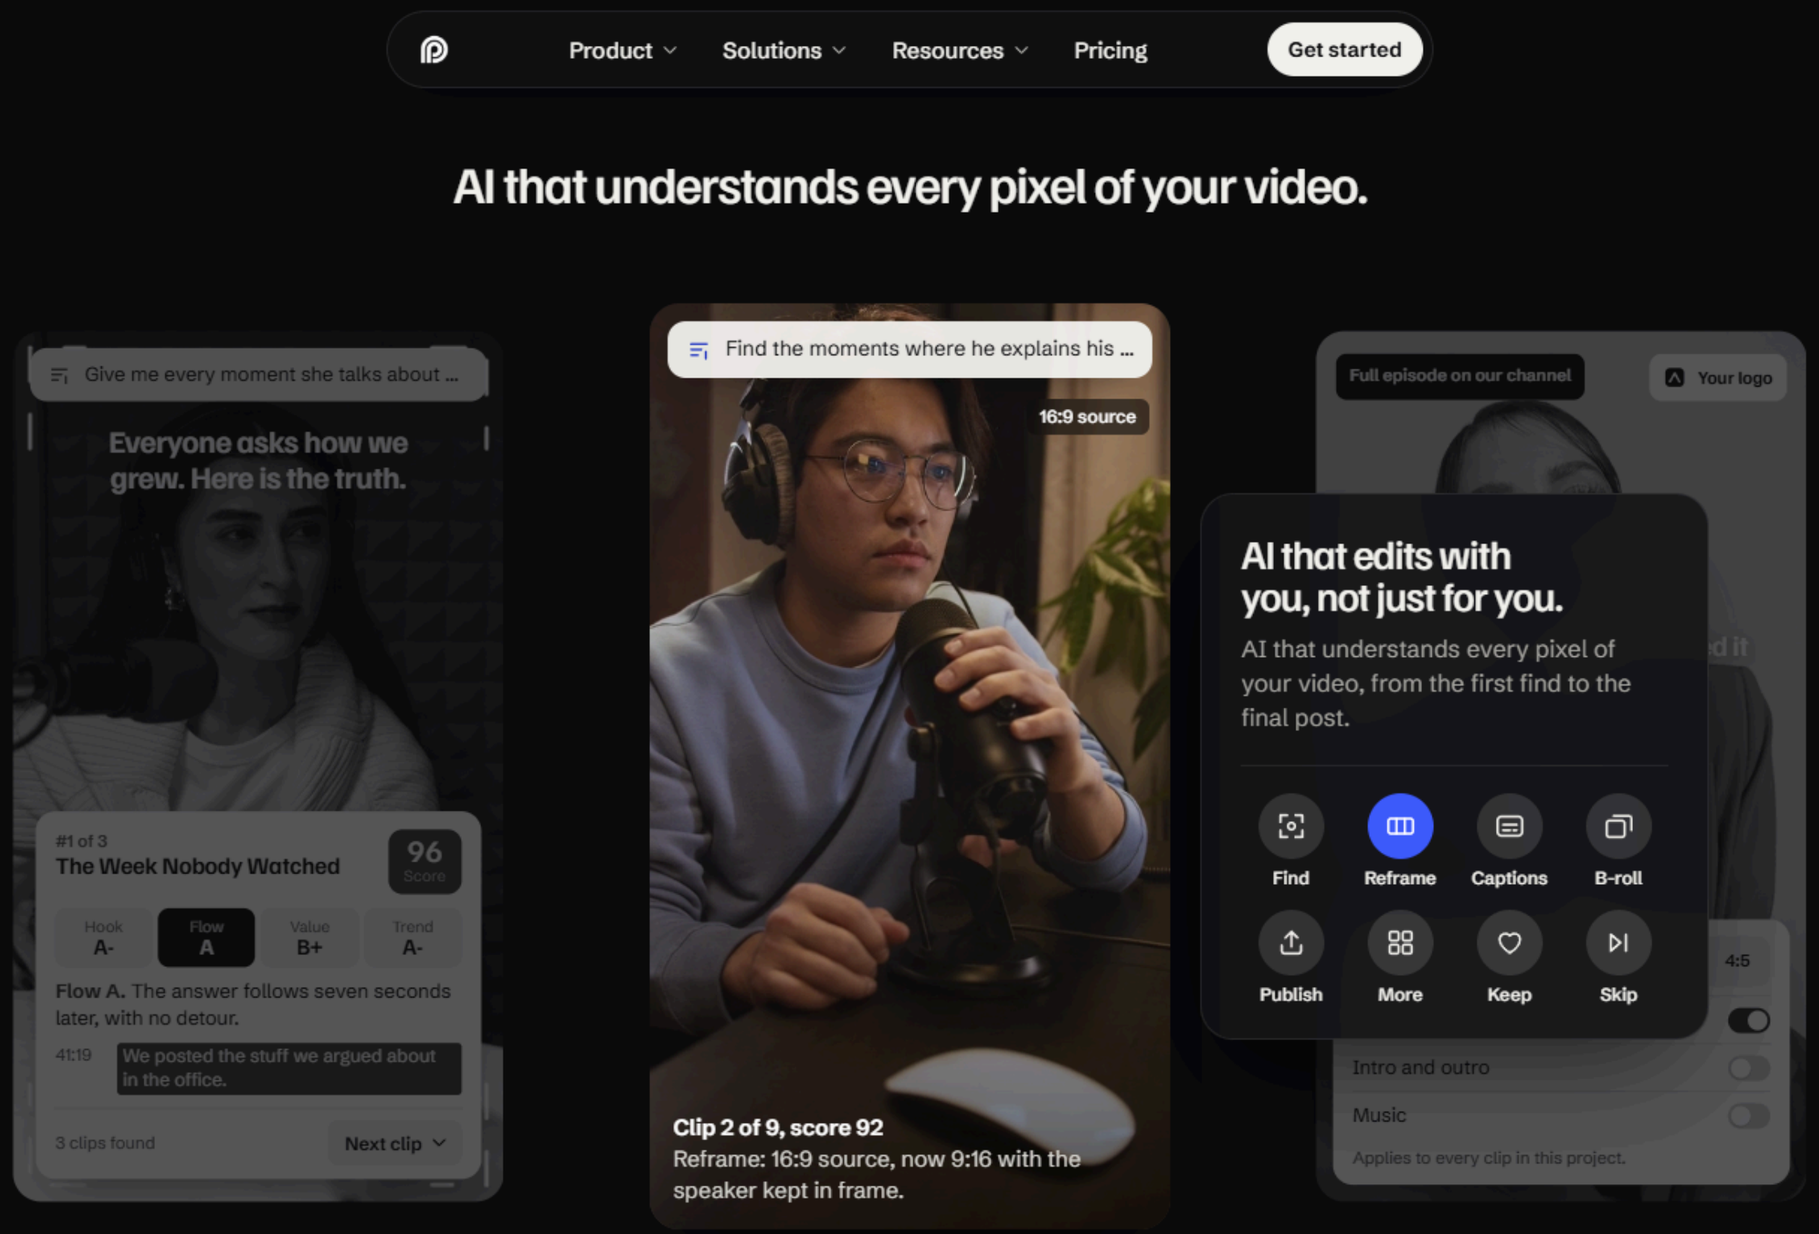

OpusClip's customers live in YouTube Shorts, Instagram Reels and TikTok. The homepage borrows the grammar of those feeds, so visitors experience the product's output format before they read about it.

1. **One screen per swipe.** Each section fills the viewport and snaps into place one at a time (CSS scroll snap), in the same rhythm as swiping between Shorts.
2. **Vertical footage first.** The hero is a wall of 9:16 clips drifting in alternating columns, and the product trio shows each feature inside a vertical phone frame.
3. **Feed navigation.** Up and down buttons with a progress track sit on the right edge, mirroring the desktop Shorts player, with a pause control for motion.
4. **Action column.** Round labelled buttons (Find, Reframe, Captions, Keep, Skip) follow the Shorts and Reels action column, and drive the demo inside each phone.
5. **Native details.** Word-by-word captions with keyword highlights, prompt bars and score overlays use the conventions of short-form video. Only the clip on screen plays, as in a feed.

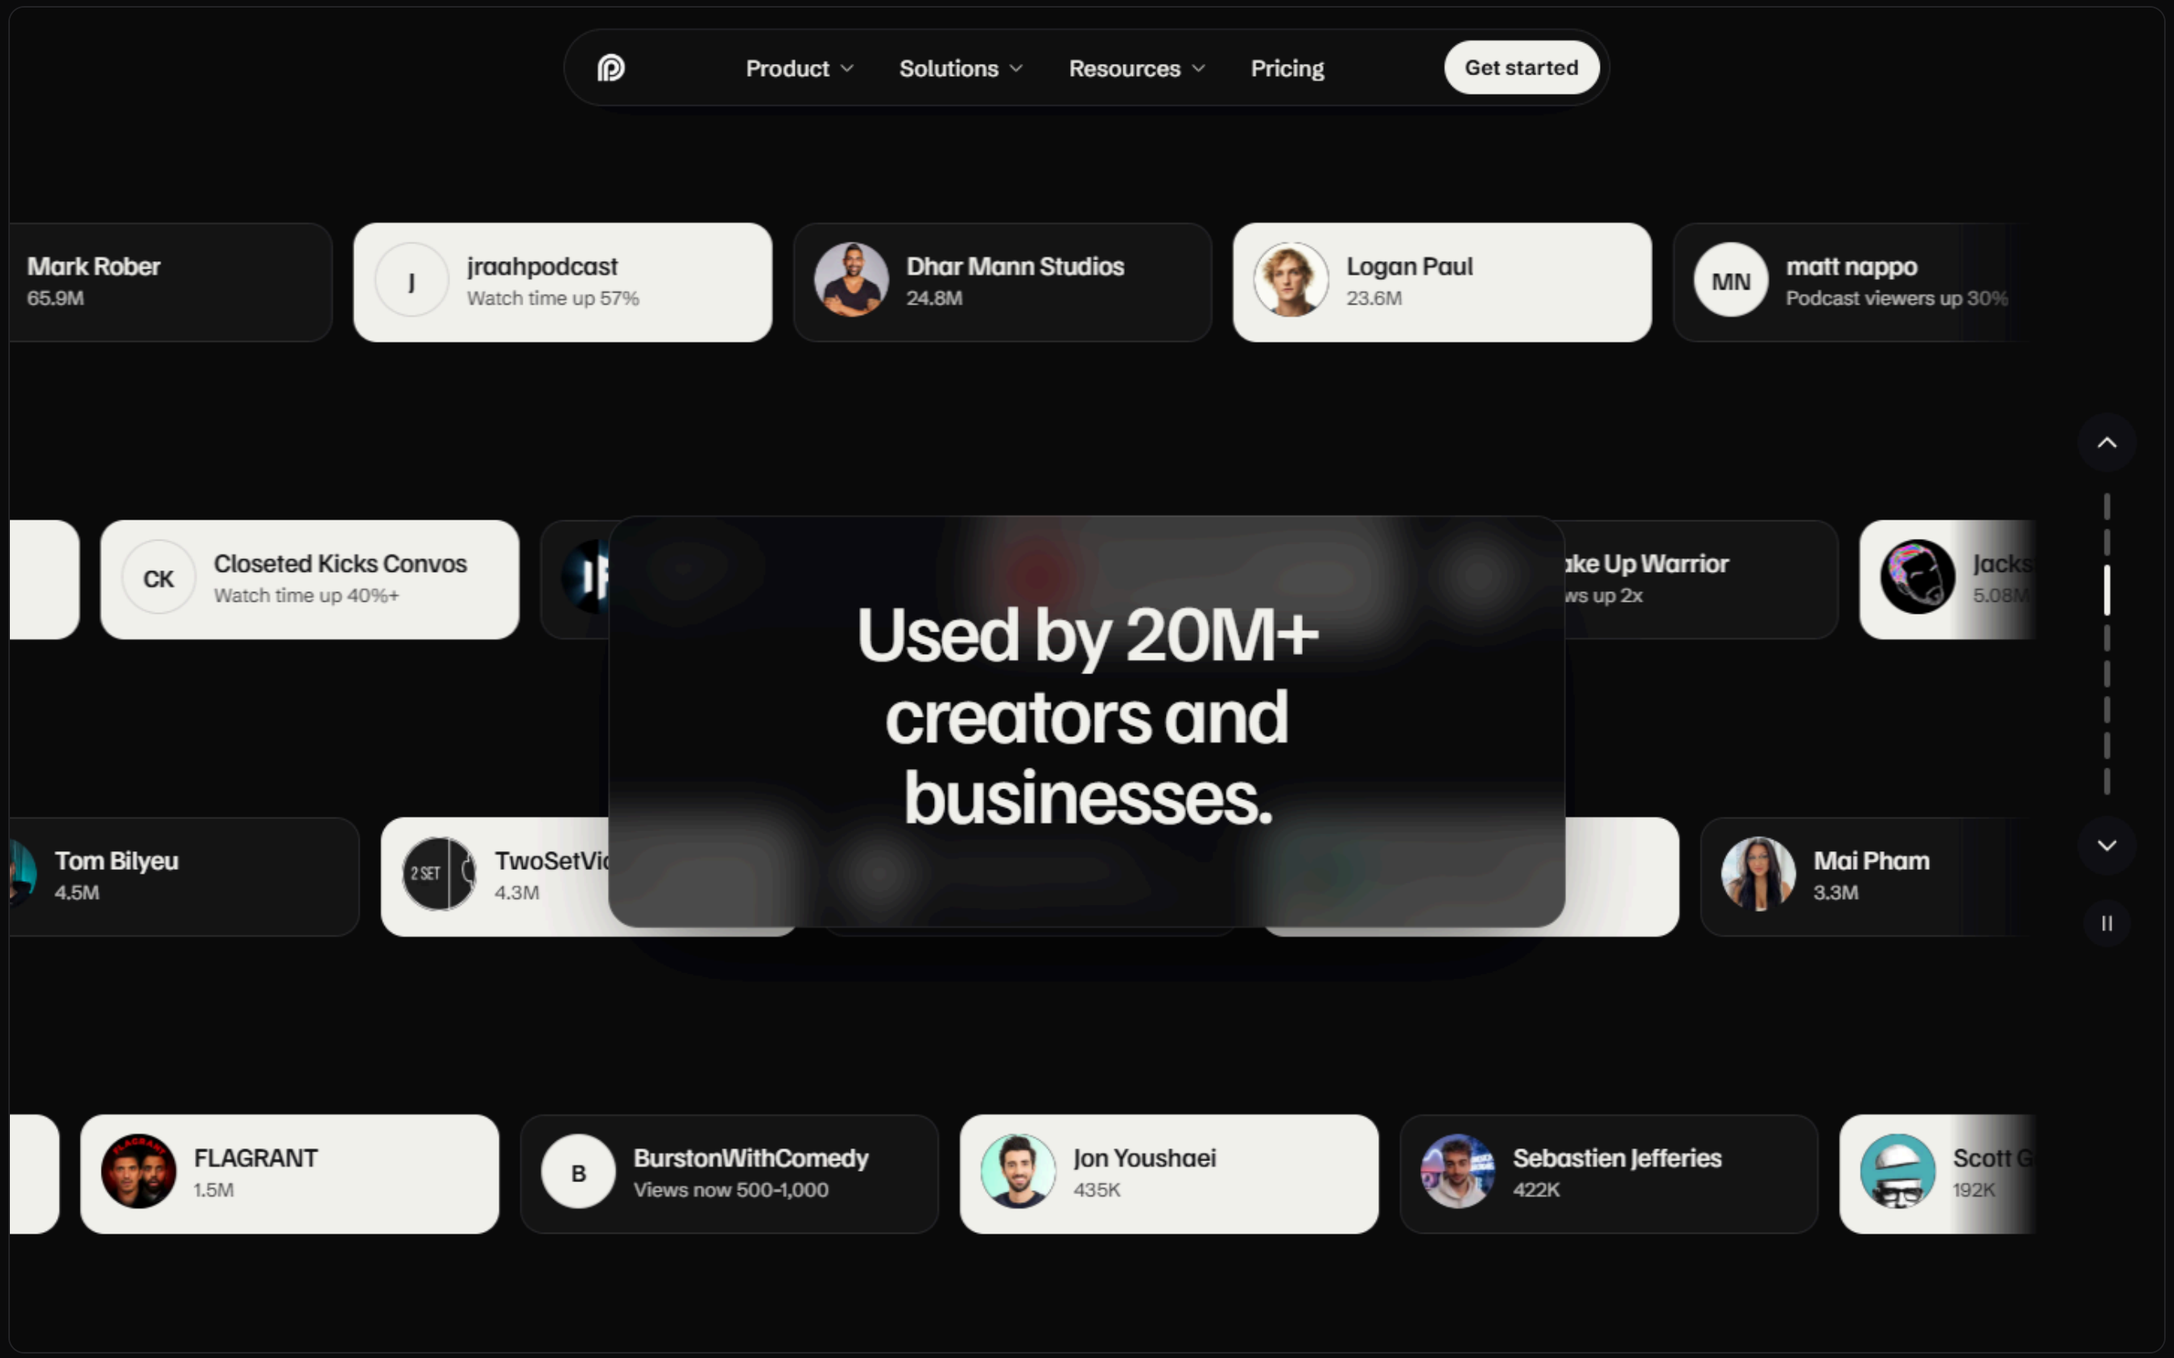

Build	Webflow sections at 100svh with `scroll-snap-type: y mandatory`; videos play and pause by viewport intersection.

Hero. Columns of vertical footage drift in alternating directions in greyscale. Every few seconds the agent selects one clip, which returns to colour with its reason. See spec 8.

Product trio. Scoring, editing tools and team templates on one screen. Selecting a phone dims the others and opens its description and controls. See spec 9.

Creators. Rows of creator profiles from opus.pro scroll in alternating directions behind the claim "Used by 20M+ creators and businesses".

A partner to your growth.

The only AI editor that actually drives growth.

“It used to take days to create clips. Now it takes us minutes to create them.”

Lewis Howes
Podcaster, The School of Greatness

“The only AI tool that I've found helpful so far is OpusClip. It can do something that I don't have time to do. I'm a super fan.”

Jason Lemkin
Founder, SaaStr

“OpusClip has been crucial in helping me upload more short form videos. I get to throw more things at the wall to see what sticks, rather than waste time editing a short that underperforms. It's a no-brainer for anyone aiming to convert their long, wide form videos to vertical shorts.”

Jacksfilms

“We love YT Shorts' massive reach but hate its revenue. That's why we use OpusClip to bring the cost down.”

How does OpusClip work?

Upload a long video or paste a link. OpusClip finds the strongest moments, rearranges them into a short with captions, reframing and transitions, and scores each one for viral potential.

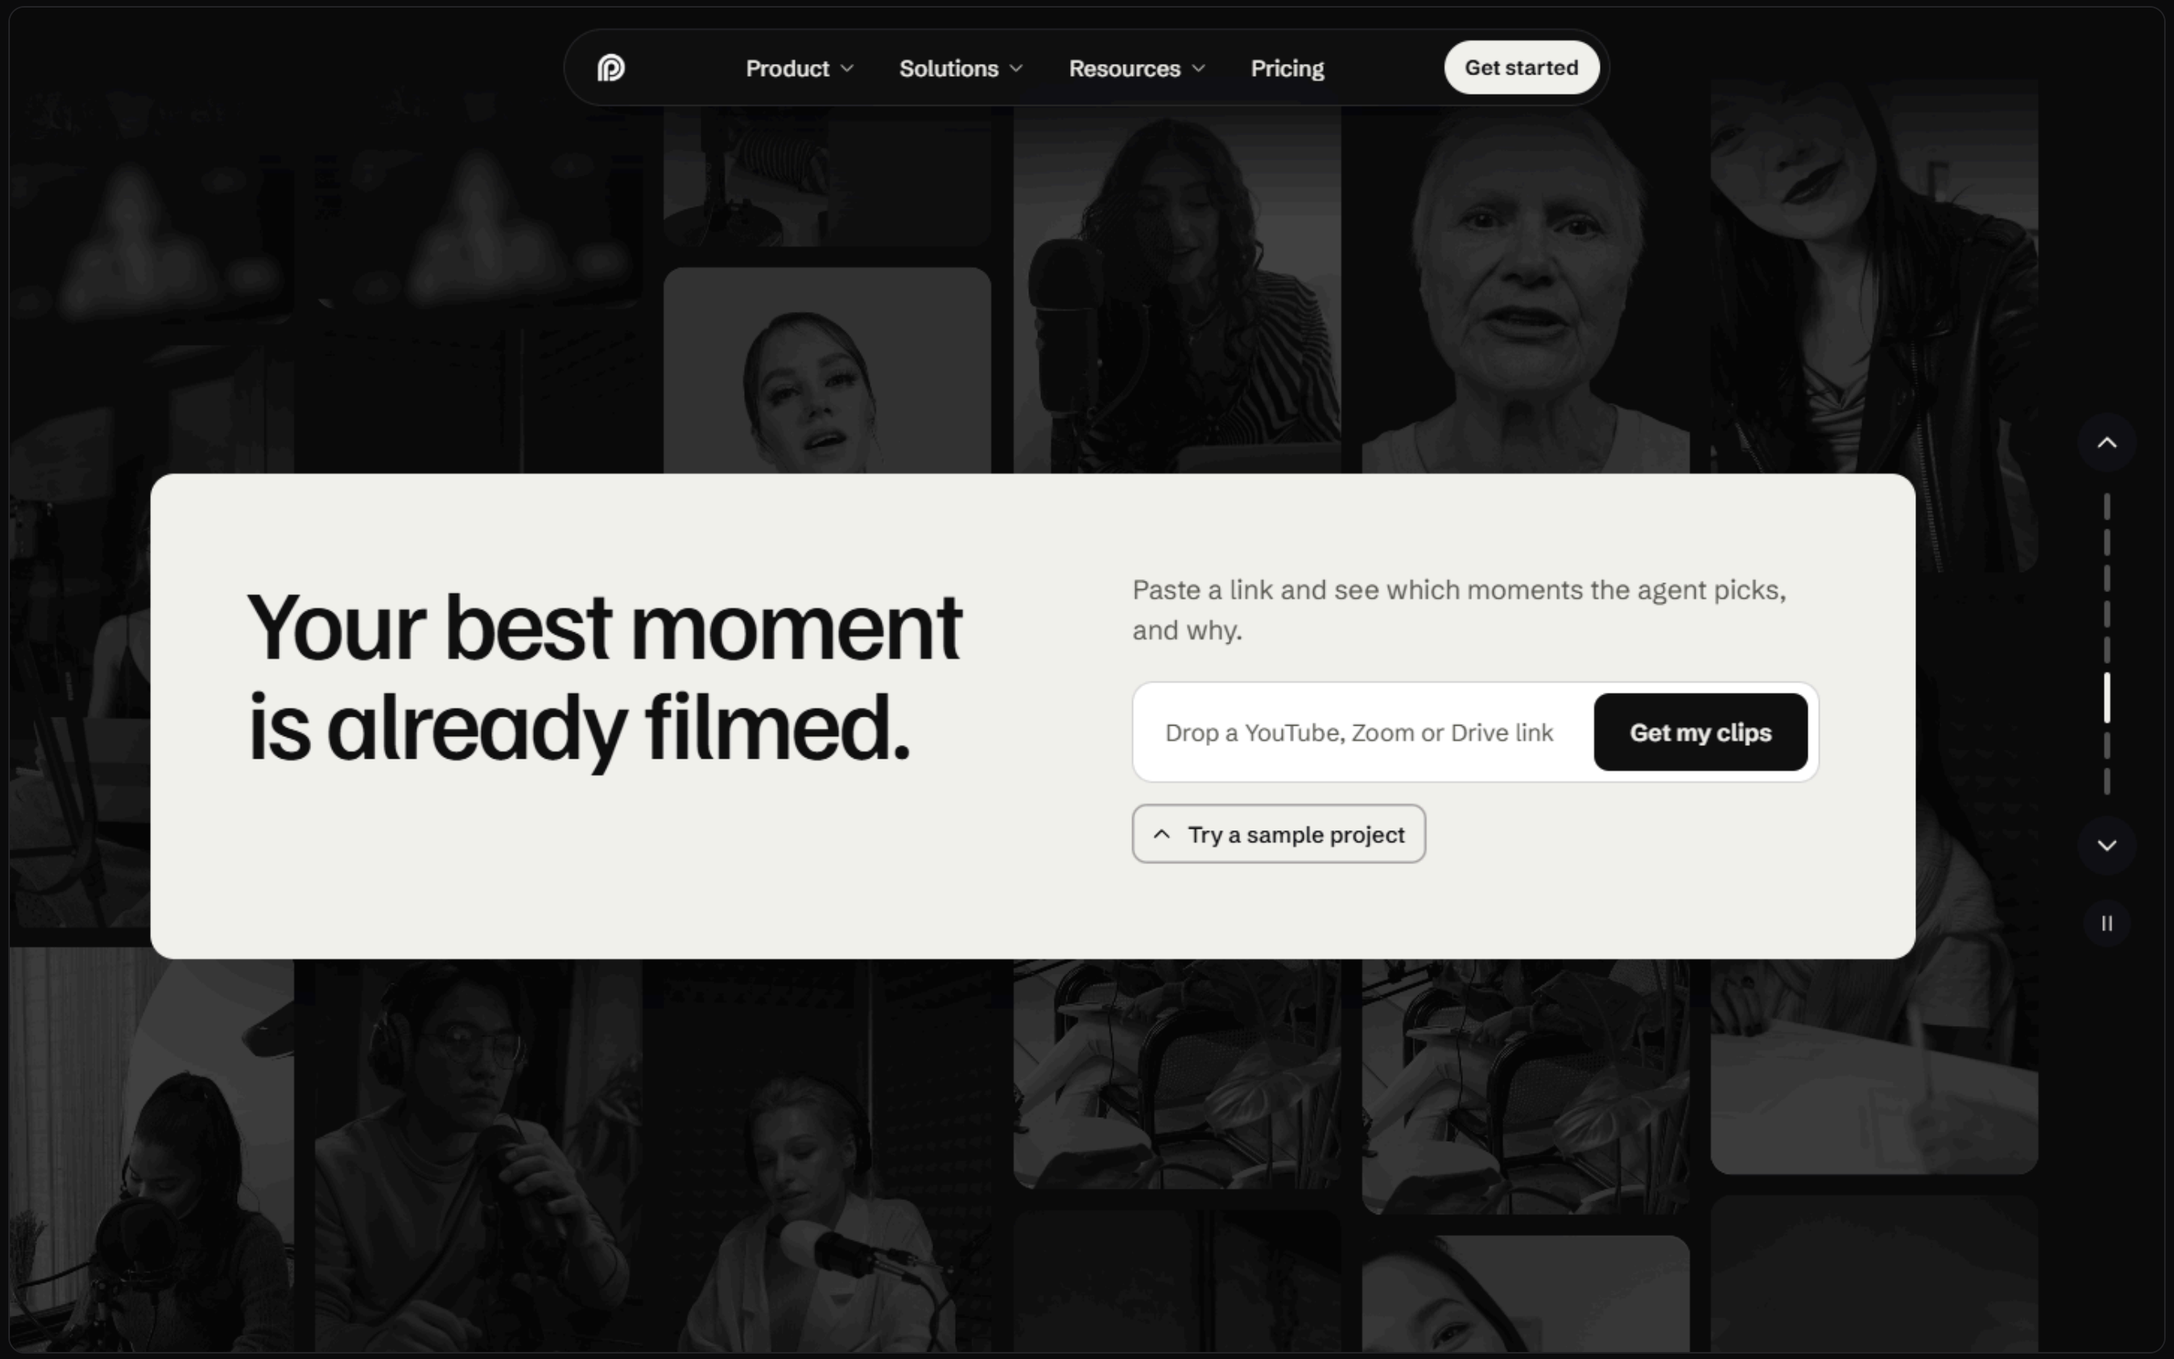

What types of videos can I upload?

Which languages are supported?

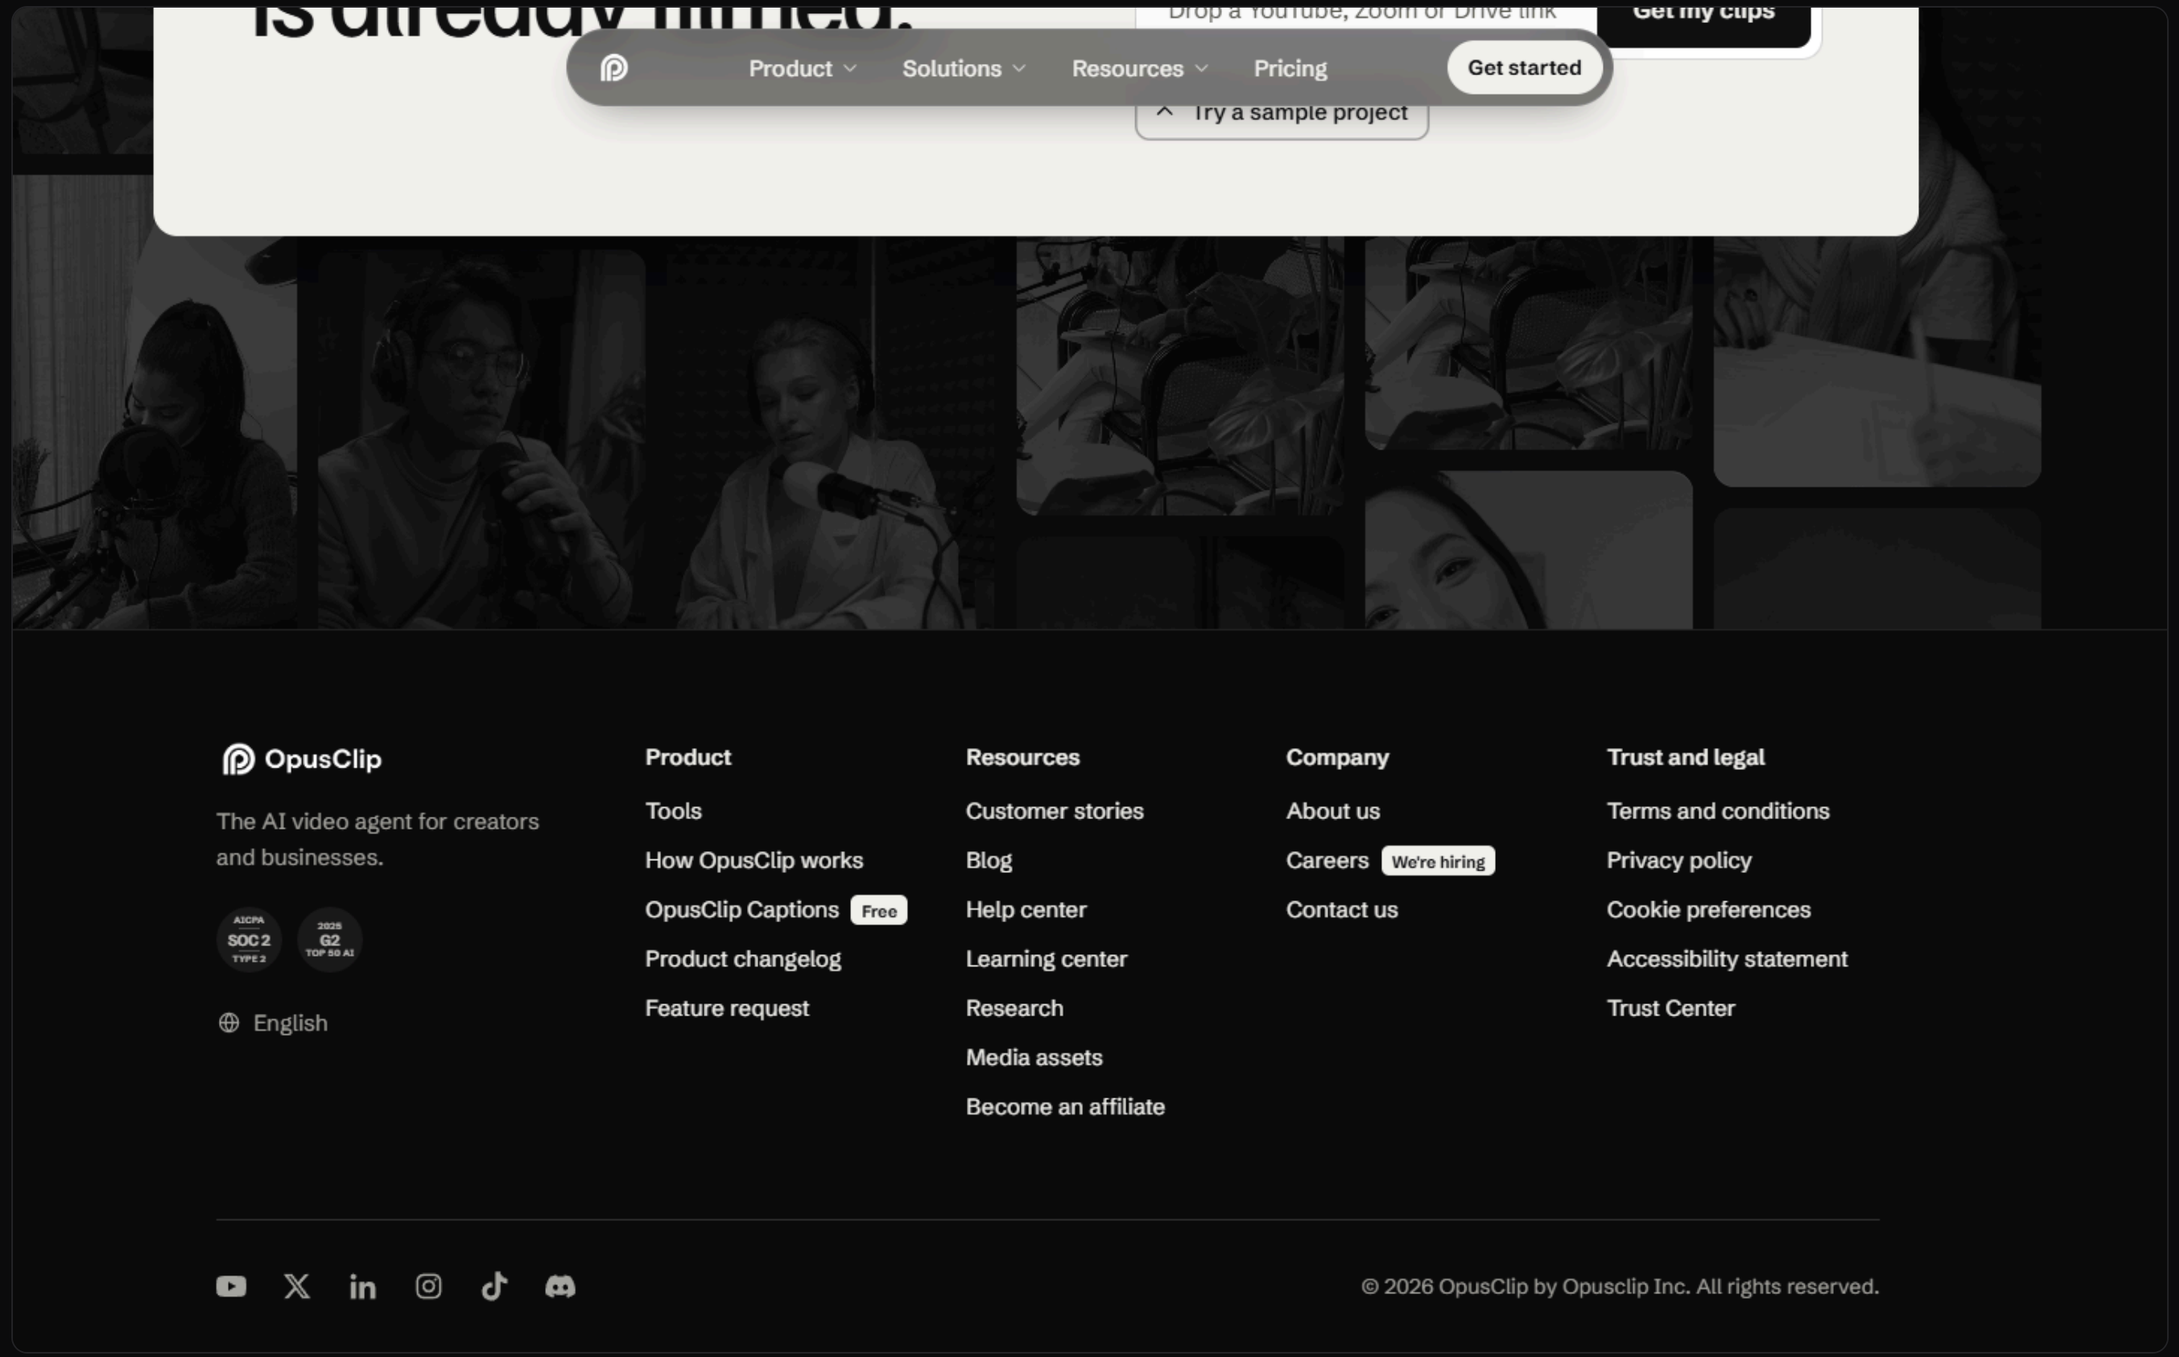

Can I add captions?

Is OpusClip free to use?

FAQ. The questions from opus.pro with condensed answers, beside a direct line to Discord and email.

Closing. A quieter reel wall behind the final call to action.

Footer. Link columns, language selector, SOC 2 Type 2 and G2 badges and social links. Scrolling beyond the end reveals the full-width wordmark with footage playing through the letters.

Clip selection

The agent selects a clip from the wall, shows why, then releases it.

1. **Wall (Webflow).** 6 to 8 columns of 9:16 clips, each track duplicated for a seamless loop. Odd columns move up and even columns move down, linear, 60 s per loop with staggered start offsets. Clips render in greyscale under a 42% black scrim.

2. **Rive file.** One clip overlay artboard with state machine `pick`: states `idle`, `selecting`, `selected`, `released`; inputs `select` (trigger), `release` (trigger), `hover` (boolean).

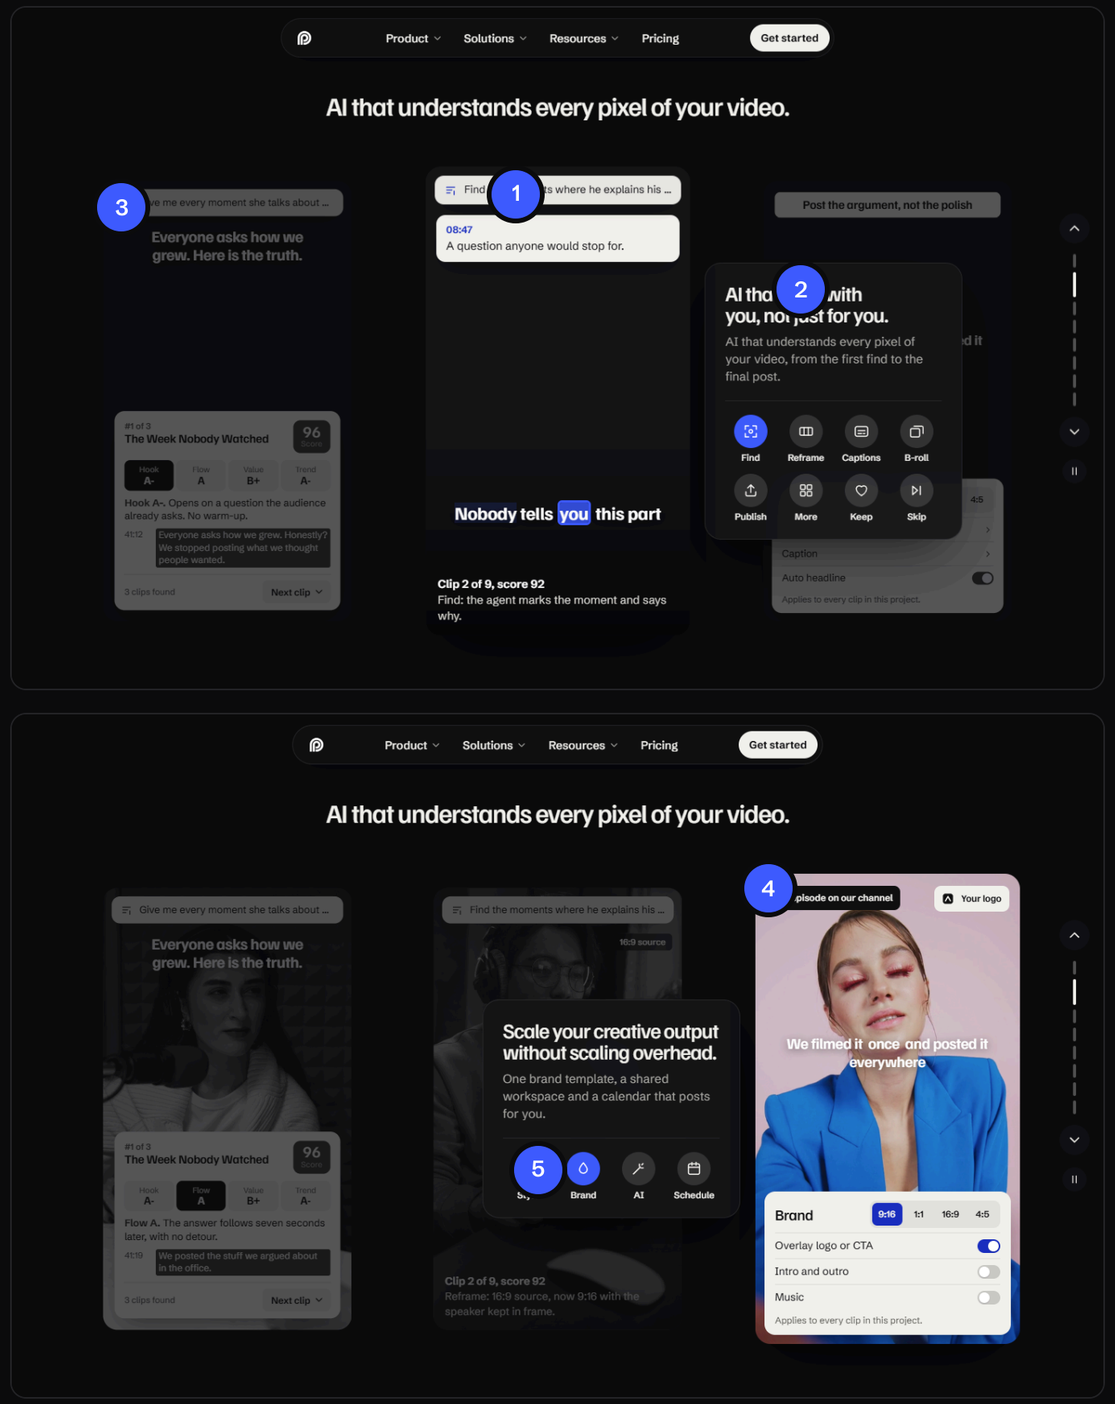

3. **Selecting, 0 to 700 ms.** The clip scales from 1.00 to 1.06 while greyscale and scrim fade to 0 over 700 ms. Crop marks at the four corners draw in over 600 ms, starting at 100 ms.

4. **Selected.** The video plays. A reason chip (timecode and one line) rises 8 px and fades in over 450 ms, starting at 200 ms.

5. **Released.** The reverse of selecting over 500 ms. The next clip is selected 3.2 s later, chosen from clips fully inside the viewport.

6. **Hover.** Hovering any clip selects it immediately and pauses the automatic cycle until the pointer leaves.

Easing	`cubic-bezier(0.16, 1, 0.3, 1)` for all transitions.
Reduced motion	Columns stop; the selection changes colour only, with no scale or draw.

Three phones, one selection

Scoring, editing tools and team templates share one screen. Upper frame: middle phone selected. Lower frame: right phone selected.

1. **Default.** The middle phone is selected on load, so the box is never empty.
2. **Box.** A 340 px panel with 22 px radius, 90% black and an 18 px background blur. It holds the headline, one sentence and that phone's controls, placed 20 px to the right of the phone, or to the left for the right-hand phone.
3. **Dimmed phones.** Opacity 32%, greyscale, scale 0.94, video paused. Transition 500 ms.
4. **Selected phone.** Full colour, scale 1.0, video playing. The box fades in and slides 10 px over 300 to 400 ms, 80 ms after the phone.
5. **Controls.** Each phone's buttons (for example Find, Reframe and Captions) sit in the box and drive the demo inside that phone.

Trigger	Mouse enter selects after 120 ms; click or keyboard focus pins the selection; leaving the section returns to the pinned phone after 200 ms.
Keyboard	Each phone is focusable; the left and right arrows move between them.
Webflow	Hover and click interactions set a combo class (`is-sel`) on the phone's wrapper; the box and dimming are styled from that class.
Easing	`cubic-bezier(0.16, 1, 0.3, 1)`
